**Part III DETAILED ACTION**

1. This application is a divisional of 09/076,938 which is divisional of 08/736,434.

2. Claims 14 and 25 are pending.

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6-18-02 has been entered.

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 14 and 25 are rejected under 35 U.S.C. 112, first paragraph because the specification, while being enabling for treating Sjogren's syndrome with a fragment available upon proteolysis of alpha-fodrin, wherein said fragment comprises SEQ ID NO.1 it does not reasonably provide enablement for muteins of said fragment or sequences that are substantially similar to said fragment. The specification does not enable any person skilled in the art to which it pertains, or with which it is most clearly connected, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention, for reasons cited in Paper No.7.

Applicant's arguments and declaration filed 6-18-02 have been fully considered but are not found persuasive.

The scope of Applicant's claimed invention would encompass giving altered peptides ligands of SEQ ID NO. 1 to patients with Sjogren's disease. However, Anderton et al., newly cited, in reviewing the usefulness of APL therapy in humans concluded against the use of APL's in human autoimmune disorders and that such an approach in an outbred human population might aggravate rather than reduce pathology (page 370, 1st paragraph 2nd column).
